

Globalese price list for Globalese Cloud users

Effective as of 21/09/2021

The following are the prices for Globalese Cloud users accepting the Globalese Terms and Conditions of Use. The price list is valid from the effective date as listed in the header. The price list can be subject of change by prior notification of at least 30 days. Changes are published on the Globalese web site and in the end-user systems in the Terms and Conditions.

1. Definitions

In this price list:

Stock engine: stock engines are ready-to-use, pre-trained engines available for Globalese users.

Stock+ engine: Stock+ engines are customized stock engines, i.e. engines trained by extending a pre-trained stock engine with you own master data. They require additional training data provided by the user and must be trained at least one time in order to be used.

Domain-adapted engine: domain-adapted engines are engines trained based on the training data provided by the user, optionally by using stock data provided by Globalese. They must be trained at least one time in order to be used.

Initial training: the first training of a domain-adapted engine.

Full training: full re-training of an already trained domain-adapted engine after changing the training data.

Quick training: tuning of an already trained domain-adapted engine.

Stock+ training: any training of a Stock+ engine.

Text translation: segment-based, synchronous translation by using engines deployed for synchronous translation. Consumption can be triggered either by the given CAT tool plugin or by using the Globalese API. Basis for translation is the number of source text characters sent for translation.

Document translation: file-based, asynchronous translation. Consumption can be triggered either by the given CAT tool plugin or by using the Globalese API.

Engine Life Cycle: we release from time to time new versions of Globalese to implement fixes and improvements. Each engine has a technical version that reflects the time of training. After the implementation of a new version, engines trained on an older version are supported for six additional months starting from the date of release of the new version. After that, engines reach the end of their supported life cycle. After the end of the supported life cycle of an engine, engines must be fully re-trained in order to be used again. The life cycle status indicated in the system with following color codes:

- Green: engine is on the latest technical version and can be used for translation. The engine is fully supported.

- Yellow: engine is on the previous technical version and can be used for translation. However, there is a new version available, and re-training might improve the engine. The engine is supported for bug fixes.
- Red: the engine is on an older technical version. It can be used for translation; however, a full re-training is highly recommended. The engine is not supported anymore and should be fully re-trained in case of any issues.

2. Prices

Storing a Stock engine: free

Engine storing: 5 EUR/month

Base for invoicing is the maximum number of existing (trained) Stock+ or Domain-adapted engines in each calendar month. Each successfully trained engine is counting. Deleted engines will be deducted from the total number of stored engines at the beginning of the next calendar month.

Text translation: 0.0001 EUR/source text character

Base for the invoicing is the number of source text characters successfully sent for translation.

Document translation: 0.00002 EUR/source text character

Base for the invoicing is the number of source text characters successfully sent for translation.

Initial / full training: 50 EUR/training

Base for the invoicing is a successfully finished training, or a training started and then cancelled by the user. Engine trainings which failed for technical reasons do not count.

Quick training / Stock+ training: 10,00 EUR/training

Base for the invoicing is a successfully finished training, or a training started and then cancelled by the user. Engine trainings which failed for technical reasons do not count.

All prices are net prices and are subject to applicable statutory value-added tax (VAT). All prices are in EUR.
